Håkon Tretvoll

Statistics Norway

“Welfare and Spending Effects of Consumption Stimulus Policies” (QE Manuscript #2442-3).

Dear Håkon:

Thank you for resubmitting your manuscript to **Quantitative Economics**. I have read your revision and am pleased to let you know that I have decided to conditionally accept your paper for publication in **Quantitative Economics**.

I would like you to do one small revision and then get the paper ready for a replication check by the Data Editor. Once the latter has been passed, the paper will be considered for acceptance. The one small revision involves moving Appendix A to an Online Appendix. Appendices B and C can go in the paper or you might move them to the Online Appendix as well, I will leave that choice to you.

Please follow these steps for the replication step:

1. Go to Data Editor website and review the policy and requirements:

<https://www.econometricsociety.org/publications/es-data-editor-website/data-and-code-availability-policy>

2. Read through the check list <https://www.econometricsociety.org/publications/es-data-editor-website/beforeyou-submit>

3. Follow the steps <https://www.econometricsociety.org/publications/es-data-editor-website/package>

4. Submit to Data Editor Editorial Express for the Data Editor review:

<https://editorialexpress.com/ESData> (include replication files, final manuscript, approved online appendices, and cover letters as needed).

It would be very much appreciated if you could turn your attention to getting the material for the replication check gathered together without too much delay.

Once accepted by the Data Editor, all the final materials will be transferred to me as the **Quantitative Economics** handling coeditor for my approval and acceptance. If you have submitted your final revision to the Data Editor, there is no need to submit to the journal again.

Any questions or concerns, please contact the Director of Publications at qe@econometricsociety.org.

Many thanks for letting us consider your work, and I look forward to seeing the final version.

Sincerely,

Morten O. Ravn
Co-Editor
